

Program No. 1

DESIGN A WEBSITE FOR YOUR COLLEGE

Aim

Design a website for your college using the below template. Create separate pages for each department using external link

Program

```
<!DOCTYPE html>

<html>

<head>

<title>BVM HOLYCROSS COLLEGE CHERPUNKAL</title>

<style>

body {

margin: 0;

padding: 0;

font-family: Arial, sans-serif;

}

header {

display: flex;

align-items: center;

background-color: darkblue;

color: white;

padding: 10px;

border-radius: 10px 10px 0 0;

margin-bottom: 10px;

}

.departments-section {
```

```
display: flex;
align-items: center;
margin-top: 20px;
}

.departments {
display: flex;
flex-direction: column;
margin-left: 50px;
}

.departments a {
margin-bottom: 10px;
color: darkblue;
text-decoration: none;
}

.departments a:hover {
text-decoration: underline;
}

footer {
background-color: darkblue;
color: white;
text-align: center;
padding: 10px;
border-radius: 0 0 10px 10px;
}

</style>
</head>
```

```
<body>
<header>

<div>
<h1>BVM HOLYCROSS COLLEGE CHERPUNKAL</h1>
<h3>(Affiliated to MG University Kottayam)</h3>
</div>
</header>
<main>
<section class="departments-section">

<div class="departments">
<h2>DEPARTMENTS</h2>
<a href="cs.html">Computer Science</a>

Program No. 2

TIMETABLE

Aim

Create a timetable using HTML

Program

```
<html>
<head>
<title>
timetable
</title>
</head>
<body>
<table border="2" bordercolor="green">
<tr>
<th>day/hr</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
</tr>
<tr><td>MON</td><td>SAD</td><td>OR</td><td>DA</td><td>Linux</td><td>
PHP</td></tr>
<tr><td>TUE</td><td>PHP</td><td>DA</td><td>SAD</td><td>DA</td><td>P
HP</td></tr>
```

```
<tr><td>WED</td><td>OR</td><td>SAD</td><td>DA</td><td>PHP</td><td>OR</td></tr>
```

```
<tr><td>THU</td><td>SAD</td><td>PHP</td><td>OR</td><td colspan="2">Linux LAB</td></tr>
```

```
<tr><td>FRI</td><td>OR</td><td>Linux</td><td>PHP</td><td colspan="2">PHP LAB</td></tr>
```

```
</table>
```

```
</body>
```

```
</html>
```

Output

timetable					
file:///opt/lampp/htdocs/S4BCA[A]2022-25/t.html					
day/hr	1	2	3	4	5
MON	SAD	OR	DA	Linux	PHP
TUE	PHP	DA	SAD	DA	PHP
WED	OR	SAD	DA	PHP	OR
THU	SAD	PHP	OR	Linux	LAB
FRI	OR	Linux	PHP	PHP	LAB

Program No. 3

UNIVERSITY EXAM REGISTER

Aim

Create a web page for university exam register using forms

Program

```
<html>

<head>

<title>
Register
</title>
</head>

<body bgcolor="pink">

<table border="2" height="500" width="600">

<form>

<tr><td>First Name:</td><td><input type="text" name="n1"></td></tr>

<tr><td>Last Name:</td><td><input type="text" name="name1"></td></tr>

<tr><td>Adress:</td><td>

<textarea rows="5" cols="50" name="a1">

</textarea></td></tr>

<tr><td>Password:</td><td><input type="password" name="p1">

</td></tr>

<tr><td>Nationality:</td><td><input type="checkbox" name="India"
value="on">India

<input type="checkbox" name="China" value="on">China

</td></tr>

<tr><td>Gender:</td><td><input type="radio" name="s1" value="Male">Male
```

```

<input type="radio" name="s1" value="Female">Female
</td></tr>

<tr><td>Course of study:</td><td><select name="dropdown">
<option value="B.Com" selected>B.Com</option>
<option value="BCA" selected>BCA</option>
<option value="BSW" selected>BSW</option>
<option value="DCA" selected>DCA</option>
<option value="select" selected>select</option>
</select>
</td>
</tr>

<tr><td>
Highest Qualification:</td><td><input type="radio" name="t1" value="10">10
<input type="radio" name="t1" value="12">12
</td>
</tr>

<tr><td>Marks:</td><td>
score:<input type="text" name="r"><br><br>
percent:<input type="text" name="p"><br><br>
GPA:<select name="dropdown">
<option value="NA" selected>NA</option>
<option value="select" selected>select</option>
</select>
</td>
</tr>

<tr><td><center><input type="submit" name="Submit" value="Submit"
/></td>

```

```
<td><center><input type="Reset" name="Reset" value="Reset" /></td>
<td><center><input type="button" name="OK" value="OK" /></td></tr>
</form>
</table>
</body>
</html>
```

Output

The screenshot shows a web browser window with two tabs: 'timetable' and 'Register'. The 'Register' tab is active, displaying a registration form. The browser's address bar shows a file path: `file:///opt/lampp/htdocs/S4BCA[A]2022-25/form.html?n1=Aiswarya&name1=Lakshmi&a1=rtrhghj4wrft&p1=55456249&India=on&s1=Female&dropdown=BCA&t1=12&r=92.5&p=97&...`. The form is titled 'Register' and contains the following fields and controls:

First Name:	Aiswarya
Last Name:	Lakshmi
Adress:	dghg6r54fhhyj
Password:	*****
Nationality:	<input checked="" type="checkbox"/> India <input type="checkbox"/> China
Gender:	<input type="radio"/> Male <input checked="" type="radio"/> Female
Course of study:	BCA
Highest Qualification:	<input type="radio"/> 10 <input checked="" type="radio"/> 12
Marks:	score: 92.5 percent: 97 GPA: NA
<input type="button" value="Submit"/> <input type="button" value="Reset"/> <input type="button" value="OK"/>	

Program No. 4

AREA

Aim

Create javascript program to find the area of a

(i) area (ii) square (iii) reactangle

Program

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
h1
```

```
{
```

```
background-color:white;
```

```
}
```

```
label
```

```
{
```

```
font-weight:bold;
```

```
}
```

```
input
```

```
{
```

```
color:blueviolet;
```

```
}
```

```
button
```

```
{
```

```
color:navy;
```

```
}  
</style>  
<title>Area Calculator</title>  
<script>  
function Circle()  
{  
var radius=parseFloat(document.getElementById('circleRadius').value);  
var area=3.14159*radius*radius;  
document.getElementById('circleArea').textContent='Circle  
Area:'+area.toFixed(2);  
}  
function Square()  
{  
var side=parseFloat(document.getElementById('squareSide').value);  
var area=side*side;  
document.getElementById('squareArea').textContent='Square  
Area:'+area.toFixed(2);  
}  
function Rectangle()  
{  
var length=parseFloat(document.getElementById('rectangleLength').value);  
var width=parseFloat(document.getElementById('rectangleWidth').value);  
var area=length*width;  
document.getElementById('rectangleArea').textContent='Rectangle  
Area:'+area.toFixed(2);  
}  
</script>
```

```
</head>
<body>
<center>
<h1><u>Area Calculator</u></h1>
<h2>Circle</h2>
<label for="circleRadius">Radius:</label>
<input type="number" id="circleRadius">
<button onclick="Circle()">Calculate</button>
<p id="circleArea"></p>
<h2>Square</h2>
<label for="squareSide">Side Length:</label>
<input type="number" id="squareSide">
<button onclick="Square()">Calculate</button>
<p id="squareArea"></p>
<h2>Rectangle</h2>
<label for="rectangleLength">Length:</label>
<input type="number" id="rectangleLength">
<label for="rectangleWidth">Width:</label>
<input type="number" id="rectangleWidth">
<button onclick="Rectangle()">Calculate</button>
<p id="rectangleArea"></p>
</centre>
</body>
</html>
```

Output

Area Calculator

file:///opt/lampp/htdocs/S4BCA[A]2022-25/areas.html

Area Calculator

Circle

Radius:

Circle Area:12.57

Square

Rectangle Area:25.00

Program No. 5

EMPLOYEE REGISTRATION FORM

Aim

Create javascript program to validate the employee registration form

Program

```
<html>

<body>

<h2>Employee Registration</h2>

<form id="registration form" onsubmit="return validateform()">

<label for="username">name:</label>

<input type="text" id="username" name="username"required><br><br>

<label for="email">email:</label>

<input type="text" id="email" name="email"required><br><br>

<label for="password">Password:</label>

<input type="text" id="password" name="password"required><br><br>

<label for="pincode">pincode:</label>

<input type="text" id="pincode" name="pincode"required><br><br>

<label for="phone">phone:</label>

<input type="text" id="phone" name="phone"maxlength="10"
minlength="10"required><br><br>

<label for="address">Address:</label><br>

<textarea rows="3"cols="50" id="address" name="address"required>type
here....</textarea><br><br>

<button name="submit">Register</button>

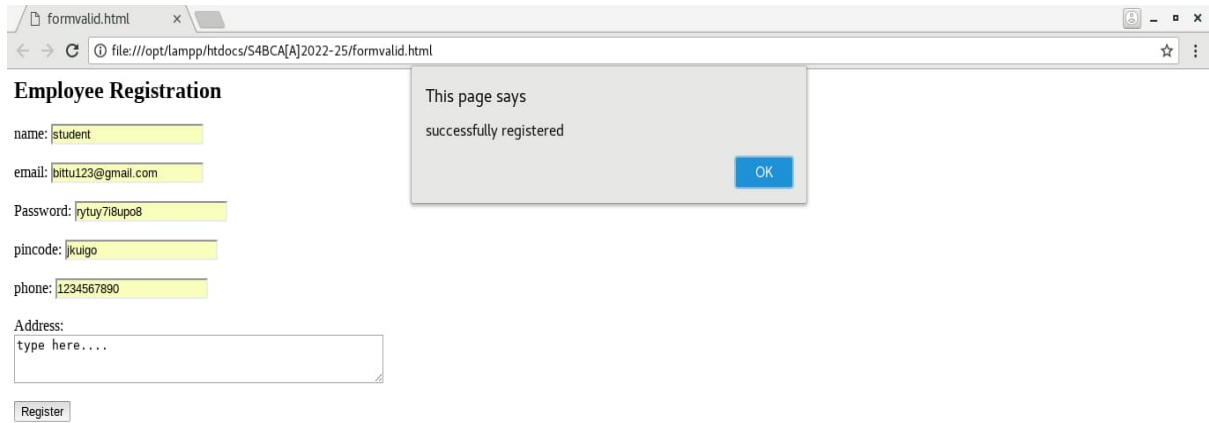

</form>

<script>
```

```
function validateform()
{
var username=document.getElementById("username").value;
var pincode=document.getElementById("pincode").value;
var phone=document.getElementById("phone").value;
var address=document.getElementById("address").value;
var email=document.getElementById("email").value;
var password=document.getElementById("password").value;
if(username.trim()=="")
{
alert("please enter your name");
return false;
}
if(pincode.trim()=="")
{
alert("please enter pincode");
return false;
}
if(phone.trim()=="")
{
alert("please enter your phone number");
return false;
}
if(address.trim()=="")
{
alert("please enter address");
```

```
return false;
}
if(email.trim()=="")
{
alert("please enter email");
return false;
}
if(password.trim()=="")
{
alert("please enter password");
return false;
}
else if(password.length<8)
{
alert("password must be of 8 characters");
return false;
}
alert("successfully registered");
return true;
}
</script>
</body>
</html>
```

Output

The screenshot shows a web browser window with the title 'formvalid.html'. The address bar displays the file path 'file:///opt/lampp/htdocs/S4BCA[A]2022-25/formvalid.html'. The page content includes a form titled 'Employee Registration' with the following fields: 'name' (filled with 'student'), 'email' (filled with 'bittu123@gmail.com'), 'Password' (filled with 'pytuy7i8upo8'), 'pincode' (filled with 'jkuigo'), and 'phone' (filled with '1234567890'). There is also an 'Address' section with a text area containing 'type here....'. A 'Register' button is located at the bottom left. A modal dialog box is open in the center-right, displaying the message 'This page says successfully registered' with an 'OK' button.

Employee Registration

name: student

email: bittu123@gmail.com

Password: pytuy7i8upo8

pincode: jkuigo

phone: 1234567890

Address:
type here....

Register

This page says
successfully registered

OK

Program No. 6

EMAIL VALIDATION

Aim

Create javascript program to validate a given email id

Program

```
<html>

<head>

<title>email validation</title>

</head>

<body>

<h2>Email validation</h2>

<label for="email">enter your email:</label>

<input type="text" id="email">

<button onclick="validateEmail()">Validate</button>

<script>

function validateEmail()

{

var email=document.getElementById("email").value;

var regex=/^[^\s@]+@[^\s@]+\.[^\s@]+$/;

if(regex.test(email)){

alert("valid email address");

}

else

{

alert("Invalid email");
```

```
}}
```

```
</script>
```

```
</body>
```

```
</html>
```

Output

Program No. 7

PRIME NUMBER

Aim

Create a javascript program to find that the given number is prime or not

Program

```
<html>

<head>

<script type="text/javascript">
var n=prompt("enter the number");
var m=0;
for (i=2;i<=n/2;i++){
if(n%i==0){
m++;
}
}
if(m<1){
document.write("prime number");
}
else{
document.write("not a prime number");
}
</script>

</head>

</html>
```

Output

Program No. 8

NUMBER OF VOWELS

Aim

Create a javascript program to find the number of vowels in a string

Program

```
<html>

<head>

<script>

var ch,i,len,count=0,c;

ch=prompt("enter a string");

for(i=0;i<=ch.length;i++)

{

c=ch.charAt(i);

if(c=='a' || c=='A' || c=='e' || c=='E' || c=='i' || c=='I' || c=='o' || c=='O' || c=='u' || c=='

U')

{

count++;

}

}

document.write("String is:"+ch+"<br>");

document.write("no of vowels"+count);

</script>

</head>

</html>
```

Output

Program No. 9

MARKLIST

Aim

Design a PHP page for getting marks of five subjects for a student and create a well formatted mark sheet

Program

index.html

```
<html>
<body>
<form method="post" action="marklist.php">
enter name:<input type="text" name="n1"/><br><br>
enter rollno:<input type="number" name="n2"><br><br>
enter marks of three subjects<br><br>
Subject 1:<input type="number" name="n3"><br><br>
Subject 2:<input type="number" name="n4"><br><br>
Subject 3:<input type="number" name="n5"><br><br>
Subject 4:<input type="number" name="n6"><br><br>
Subject 5:<input type="number" name="n7"><br><br>
<input type="Submit" value="Submit">
</form>
</body>
</html>
```

mark.php

```
<?php
$a=$_POST['n1'];
```

```

$query="update student set  admno=$a, rollno=$b, name='$c', dob='$d',
phone='$e' WHERE admno=$a ";

$sql=mysql_query($query);

?>

```

```
<script>  
alert("updated..");  
</script>
```

Output

Update Student Details

Select the student name: kala

submit

Update Student Details

Admission no	555
roll no	77
name	lora
Date of Birth	2024-03-02
Phone	6
reset	Submit

Program No. 15

DELETE

Aim

Develop a php application for recording students details (admno, roll no,name, DOB, phone number). Perform delete operation.

Program

connect.php

```
<?php
$con = mysql_connect("localhost", "root", "") or die("error");
mysql_select_db("college") or die("error");
?>
```

deletehome.php

```
<html>
<body>
<h1>Search Student Details </h1>
<form action="search1.php " method="POST" >
Select the Student Name: <select type="dropdown" name="id">
<?php
include("con1.php");
$s=mysql_query("select names from sample");
while($q=mysql_fetch_array($s))
{
echo "<option>".$q[0]."</option>";
}
?>
```

```
</select>
<br><br>
<input type="submit" name="submit" value="Search">
</form>
</body>
</html>
```

deleteaction.php

```
<?php
include("connect.php");
$id=$_POST['id'];
$sql="delete from student where name='$id'";
$query=mysql_query($sql);
?>

<script>
alert("deleted..");
</script>
```

Output

Program No. 16

BOOK SEARCH

Aim

Design tables to store book details (book no, title, author, price, date of purchase) and insert five records. Create a search page in php for displaying book details based on its title.

Program

conn.php

```
<?php
$con = mysql_connect("localhost", "root", "") or die("error");
mysql_select_db("college") or die("error");
?>
```

search.html

```
<html>
<body>
<h1>Search Student Details </h1>
<form action="searchaction.php" method="POST">
Select the book title: <select type="dropdown" name="id">
```

```
<?php
include("connect.php");
$s=mysql_query("select title from book");
while($q=mysql_fetch_array($s))

{
```

```
echo "<option>".$q[0]."</option>";
}
?>
</select>
<br><br>
<input type="submit" value="Search">
</form>
</body>
</html>
```

searchaction.php

```
<html>
<body>
<?php
include('connect.php');

$id=$_POST['id'];
$sql="select * from book where title='$id'";
$query=mysql_query($sql);
?>
<center><h1>Student Details</h1></center>
<table align="center" border="1">
<tr>
<th>BOOK NO:</th>
<th>TITLE</th>
<th>AUTHOR</th>
```

<th>ADDRESS</th>

<th>PRICE</th>

<th>DATE OF PURCHASE</th>

</tr>

<?php

while(\$row=mysql_fetch_array(\$query))

{

?>

<tr>

<td><?php echo \$row[0]?></td>

<td><?php echo \$row[1]?></td>

<td><?php echo \$row[2]?></td>

<td><?php echo \$row[3]?></td>

<td><?php echo \$row[4]?></td>

<td><?php echo \$row[5]?></td>

</tr>

<?php

}

?>

</table>

</body>

</html>

Output

Search Book Details

Select the book title: pmk ithal

Search

Book Details

BOOK NO	TITLE	AUTHOR	ADDRESS	PRICE	DATE OF PURCHASE
2614	pmk ithal	priya a.s	fgtuhyghjkhkuy8	250	2024-03-02

Program No. 17

LOGIN SESSION

Aim

Create a login page using session

Program

login.php

```
<?php
ob_start();
session_start();
?>
```

index.html

```
<html>
<body>
<h1>Login</h1>
<form action="visituser.php" method="post">
<label for ="uid">User Id</label>
<input type="text" name="uid" placeholder="Enter id"><br><br>
<label for ="upass">Password</label>
<input type="password" name="upass" placeholder="Enter
password"><br><br>
<input type="reset" value="reset">
<input type="Submit" value="submit">
<?php
```

logout.php

```
<?php
session_start();
unset($_SESSION["username"]);
unset($_SESSION["password"]);
echo "you have cleaned the session";
header('Refresh:2;URL=login.php');
?>
```

Output

Program No. 18

VISITOR'S COUNT

Aim

Create a PHP program to find the visitor's count

Program

connect.php

```
<?php
$con=mysql_connect("localhost", "root", "") or die("error");
mysql_select_db("visit") or die("error");
?>
```

index.html

```
<html>
<body>
<h1>Login</h1>
<form action="visituser.php" method="post">
<label for ="uid">User Id</label>
<input type="text" name="uid" placeholder="Enter id"><br><br>
<label for ="upass">Password</label>
<input type="password" name="upass" placeholder="Enter password"><br><br>
<input type="reset" value="reset">
<input type="Submit" value="submit">
<?php
```

visituser.php

```
<?php
```

```
include('con1.php');
$username=$_POST['uid'];
$password=$_POST['upass'];
$query="select * from login where userid='$username' and password='$password'";
$result=mysql_query($query);
$row=mysql_fetch_array($result);
$count=mysql_num_rows($result);
if($count==1)
{
echo "<h1><center>Login successful.....</center></h1>";
$query1="update login set visit_count=visit_count+1 where userid='$username'";
$result1=mysql_query($query1);
if(!$result1)
{
die("Updation successful....".mysql_error());
}
$result=mysql_query($query);
$row=mysql_fetch_array($result);
echo "Number of visits by you: $row[2] ";
}
else
{
echo "<h1>Login Failed.Invalid username or password</h1>";
}
?>
```

Output
